

Hello,

I am Manjari Akella, a recent Computer Science graduate of The Ohio State University, Columbus, Ohio. I am looking for full time opportunities and came across this listing for a Data Scientist.

I have had a long academic career where I have dabbled in multiple fields. My interests lie in the field of data mining/analytics and machine learning, specifically computer vision. I have a passion for working with data and finding insights from it. Having said that however, I am always willing to learn more and try something new; even if it is outside my comfort zone.

I have experience coding in Java, C++, and MATLAB. I am familiar with Python as well. I have a solid knowledge and understanding of OO concepts. I have worked with databases and have considerable experience handling relational databases. I have a theoretical understanding of Hadoop as well. I have worked as a research assistant through my academic career and as a part of it I have had successful experience in coding several machine learning algorithms. I have a thorough understanding of basic classification, clustering and statistical analysis algorithms. Most of my projects have involved working with data and deriving insights from it. I have worked with different types of data including images, faces, fingerprints, documents. It has helped me understand the finer nuances of concepts such as feature selection, clustering, and classification as well as several approaches to statistical analysis.

As a recent graduate I am looking forward to kick-start my career with a job in which I can not only put to use the skills I have learnt throughout college but produce real results while working on something I enjoy doing. I believe, this job would give me the perfect platform to do so.

I would love to discuss this opportunity further. If you have questions, or if you find me fit to schedule an interview, please contact me at (614)556-0456 or akella.4@osu.edu.

I look forward to your response.

Regards,

Manjari Akella
